Electrical and Data Contractors

BRINGING YOU THE POWER

service division

Watters Electrical has the capacity, expertise and resources to manage and coordinate all types of electrical work, and our service division plays an integral part in the overall package.

All offices have fully equipped service vans on the road. We offer breakdown and routine electrical maintenance services, ranging from a periodic walk through to smaller electrical projects. We also offer a 24 hour emergency service for existing clients.

We have dedicated service managers with many years' experience, who have the time and expertise to provide the best solutions for your electrical requirements, as well as technical advice and support. The service department also has a dedicated data and service coordinator, who with you the client in mind, ensures that all programming runs smoothly.

When undertaking electrical work, the needs of our clients are paramount.

We pay particular attention to:

- Working with minimal disruption to all
- Being 'proactive' rather than 'reactive' service providers
- Offering cost effective measures where appropriate e.g. (refurbish or repair, against replace)

- The environmental impact of the products that we promote
- Ensuring that all work meets with accreditation standards and legislative requirements
- Promoting energy saving solutions
- Consistently producing electrical work of a high standard
- Safe work practices

Through regular training and meetings, we ensure that our company keeps up to date with the latest electrical developments. The size of our company ensures that we have access to the latest time saving and safety equipment including scissor lifts, a power analyzer and a thermal imaging camera.

It is the aim of the Watters Electrical Service Department to provide a professional and forward thinking approach to all your electrical needs so as to achieve total client satisfaction.
